WHAT'S NEW VERSION 7

Redtooth SmartQuiz Version 7 is Here!

We are delighted to announce the general release of SmartQuiz 7! The new versions of SmartQuiz as well as SmartQuiz Pro have some great additions and improvements, which we will tell you more about in this document.

Some of the exciting new features include:

- Trivia Bingo, music Bingo and Emoji Bingo
- New quiz player style
- Automatic screen resolution and 4K support
- Video backgrounds
- Word games
- Undo/Redo
- Nearest wins questions
- And more!

BINGO

SmartQuiz 7 introduces BINGO! Play oldschool number BINGO, Music Bingo or Trivia BINGO. Players see the BINGO card on their SmartQuiz app and check the boxes while watching the big screen. A BINGO claim can be made by pressing the BINGO button after which the evaluation will take place automatically and will be shown on the big screen.

No manual checks are necessary, but in case of doubt by the player the specific player's card along with the cells that should have been ticked can always be opened in SmartQuiz Director.

For SmartQuiz subcribers, the regular number as well as Emoji Bingo game is made available as a free game. It can always be played on the day when there is a subscription for a SmartQuiz. We will soon be offering other (Music) Bingo games for purchase. These games can be played outside of your regular Smart Quiz subscription and are credit based (you can play them a predetermined amount of times).

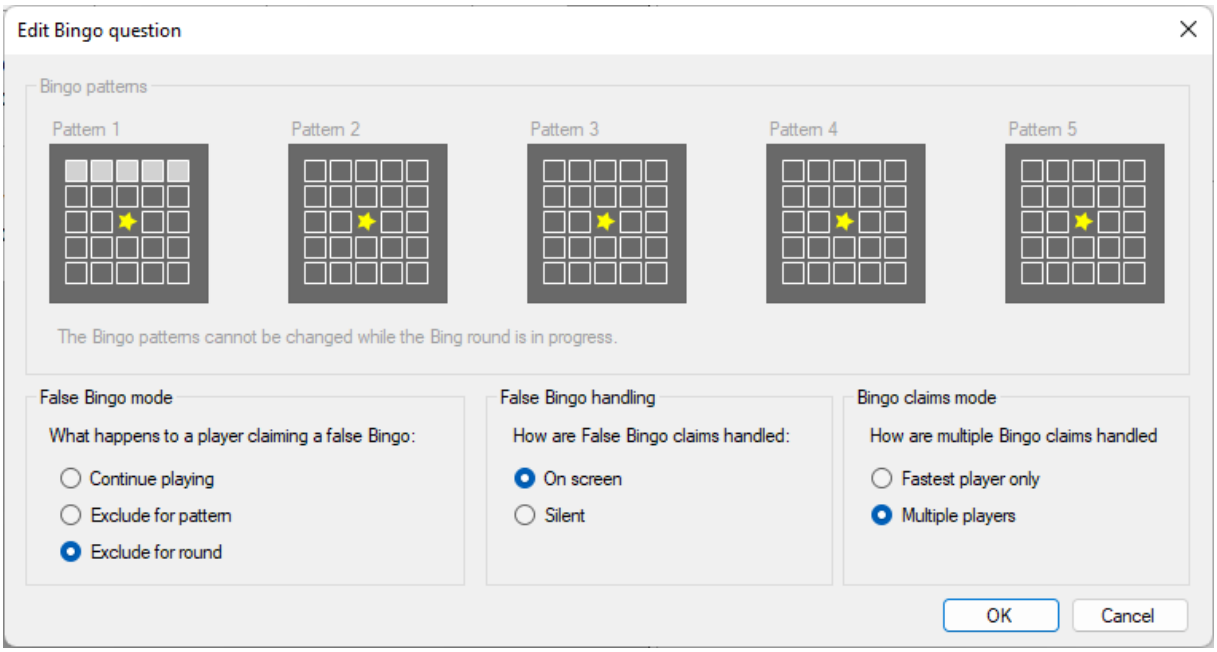
SmartQuiz Pro users can create a Bingo round as part of a quiz. As it's possible to define blank cells, it's not necessary to have a full card (and consequently, as many questions). As such, a quick Bingo game can also be played.

Number Bingo

Play old school number Bingo where the numbers are shown one by one on the big screen. Balls already played are displayed along with the current Bingo pattern.

Players tick the numbers on their phones and press the Bingo button to claim their Bingo. Once a player claims Bingo, the players name is displayed on the Big screen and the Bingo is evaluated.

In SmartQuiz Director, it is possible to change the patterns being played for along with other settings, while a Bingo game is running.



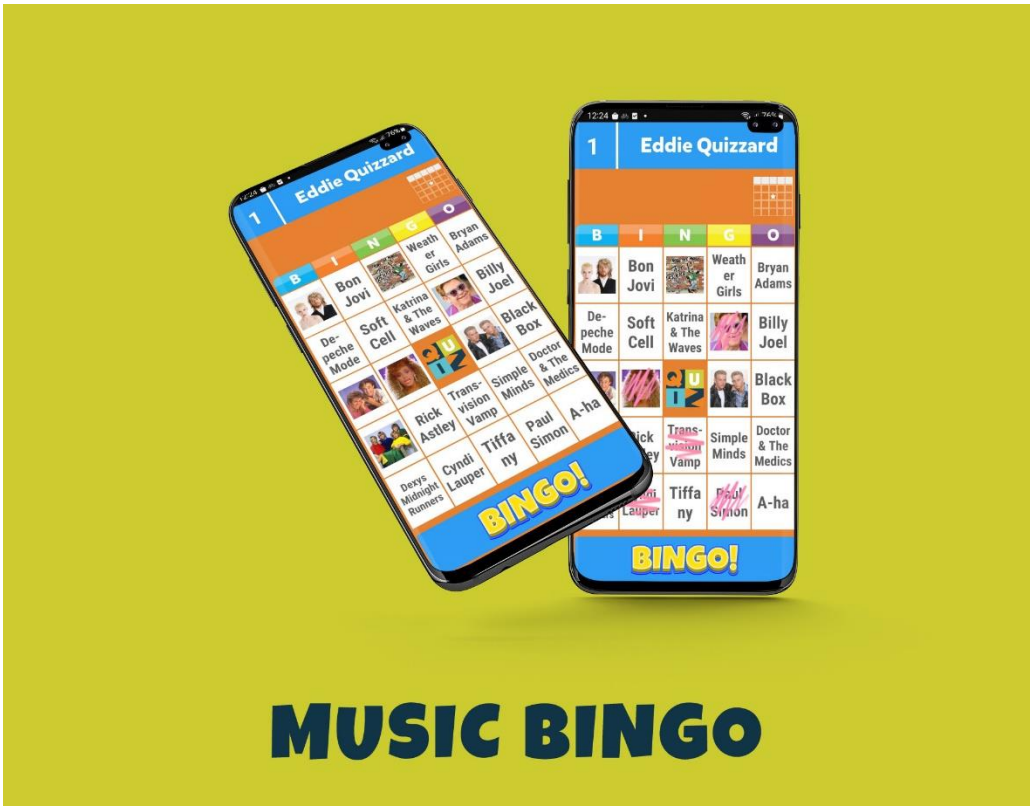
EMOJI Bingo

Old school number Bingo for a new generation! As a host, call out the Emoji's appearing onscreen. Use your own descriptions to describe them. Hilarity guaranteed!

The Emoji's are displayed on the phone. Tick them, watch the current pattern and make a Bingo claim when you've got it covered.

Music Bingo

Combine a disco party playing your favourite tunes with Bingo! Songs are played, the pub is dancing and players tick the songs they hear on their phone. The cells on the phone show text or an image (for example of an artist or album).



Trivia Bingo

Play a quiz in the form of Bingo. The correct answers are on the phone while the questions appear on the big screen.

Evaluating a Bingo claim

Once one or more players press Bingo, the name of the player appears onscreen (if you configured that more than one player can claim Bingo, multiple names will appear). A countdown sequence will now appear while the system evaluates the claim and builds some suspense.

Depending on whether the claim was valid or not, a thumb up or thumb down will appear on the big screen.

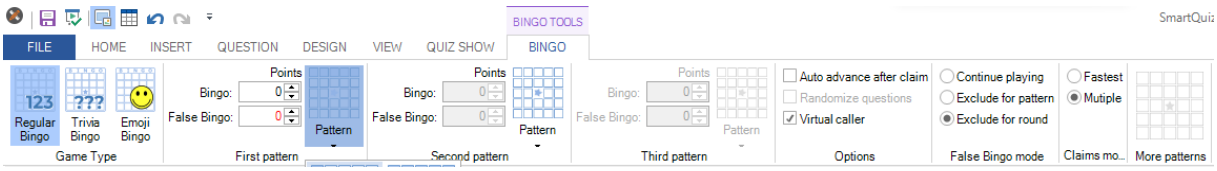
The player that claimed Bingo, will see either a thumb down (invalid claim) or BINGO animation on the phone along with a sound being played. In case of a valid claim, the pattern that lead to the Bingo is indicated with green ticks.

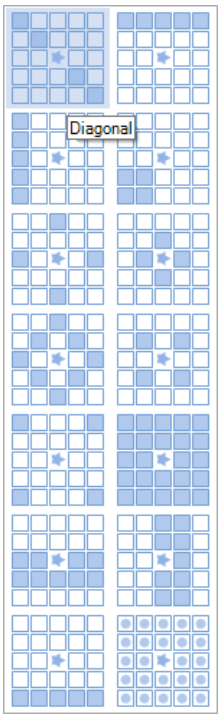
It is possible to switch off false Bingo claims being shown on the big screen. In this case, only when there is a valid Bingo, the player is shown onscreen along with the evaluation.

Bingo in SmartQuiz Pro

When creating a Bingo game or Bingo round as part of a quiz, the Quiz Wizard helps you to generate the content quickly.

SmartQuiz Studio offers a lot of configuration options for the round. Along with the type of Bingo, you can define points to win/lose for valid/invalid claims, the sequence of patterns that are going to be played as well as what needs to happen when a claim is made.



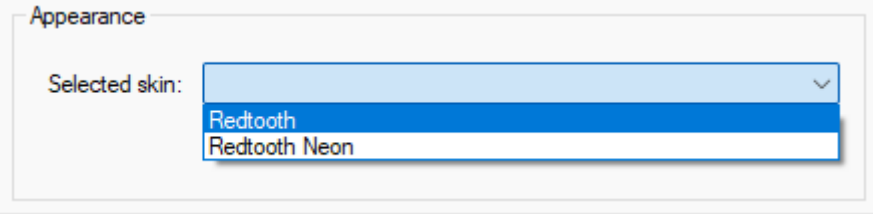


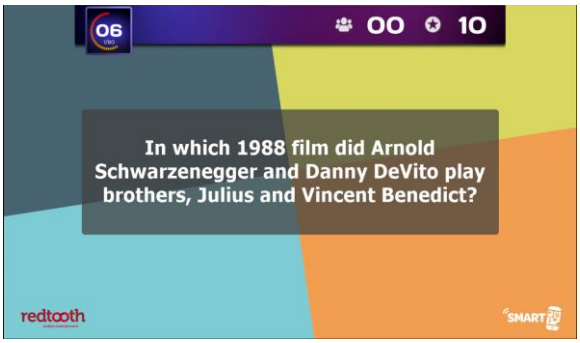
SmartQuiz Studio offers 13 predefined well-known Bingo patterns that can be used. But, it is also possible to define your own custom patterns!

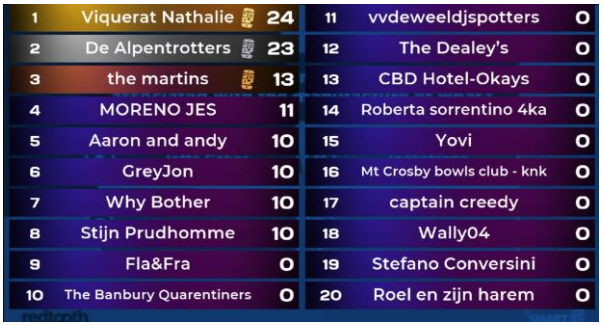
On the quiz slides, you can use a picture along with the question shown, which is then shown on the phone in a cell as one of the answers to be ticked. In this case, do indicate that the picture should not be shown on the big screen too (otherwise the question will be very simple to answer!).

NEW SMARTQUIZ PLAYER STYLE

Next to the well known SmartQuiz player style, a new Neon style is now available which you can select in Setup on the ‘Screens’ tab.

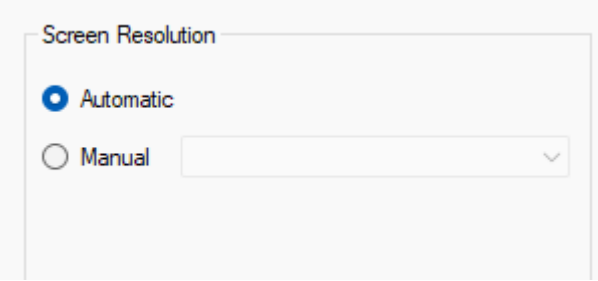






AUTOMATIC RESOLUTION AND 4K SUPPORT

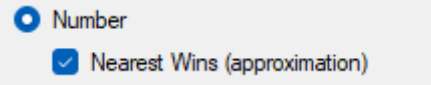
In previous versions of SmartQuiz, the resolution of the output device (projector/beamer/TV screen) had to be selected. Now, there is an ‘automatic’ option that makes sure everything is presented in the best possible way!



Besides this, there is now also support for 4K screens to make your SmartQuiz look even crispier!

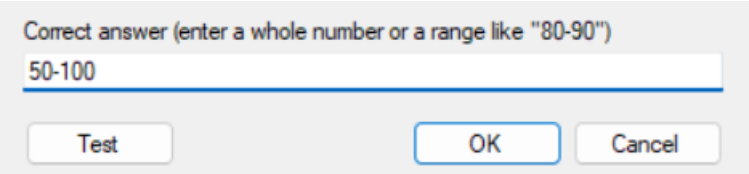
Nearest Wins

Numeric questions can now have one winner, the player that is closest to the answer (or players in case of a shared answer).



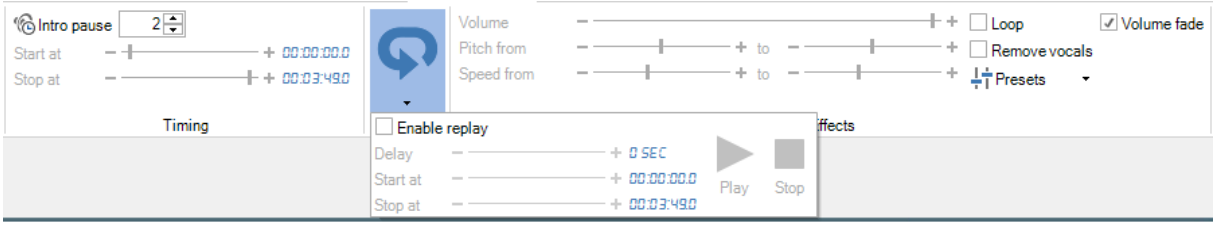
Numeric Range

You can enter a range of numbers, where any answer in between is considered a correct answer.



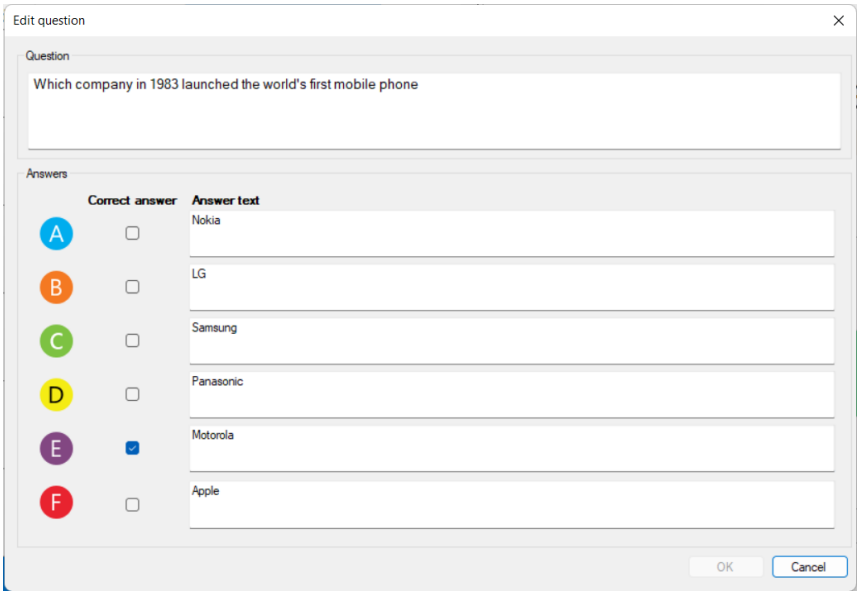
Repeat Songphrase at End of Question

If a question contains audio, It is now possible to indicate that the audio needs to be replayed after the correct answer has been revealed. This can be done indicating a certain timeframe, allowing you for example to play the chorus of a song at the reveal of the correct answer.



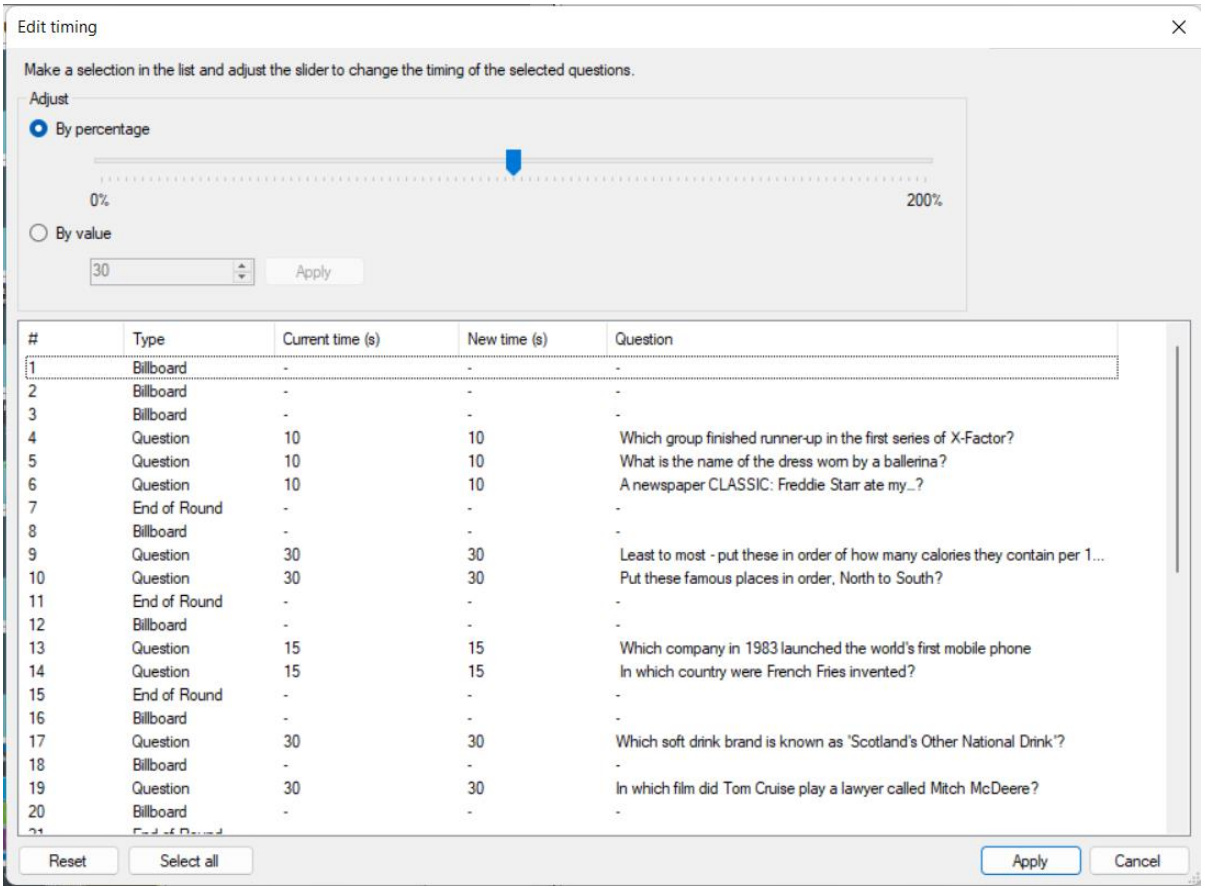
Edit Questions While Running a Quiz

You can edit the question and answer texts as well indicate the correct answer(s) from Director while the quiz is running.



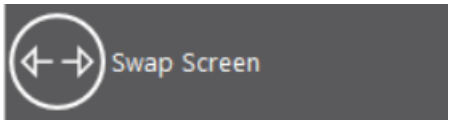
Edit countdown time during quiz

In need for a longer countdown? You can now change the countdown time for one or more questions while the quiz is running.



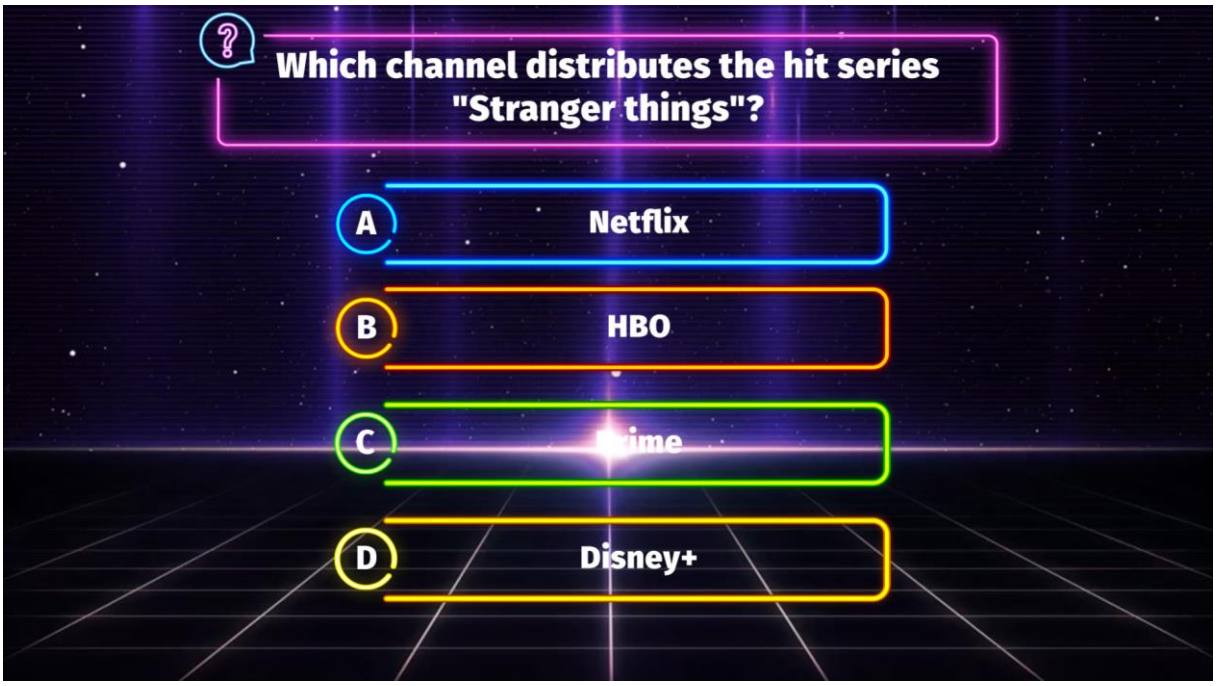
Swap screens

Are you using Director during a quiz but it starts up on the wrong screen ? Press the 'Swap screen' button to swap the Quiz player and Director.



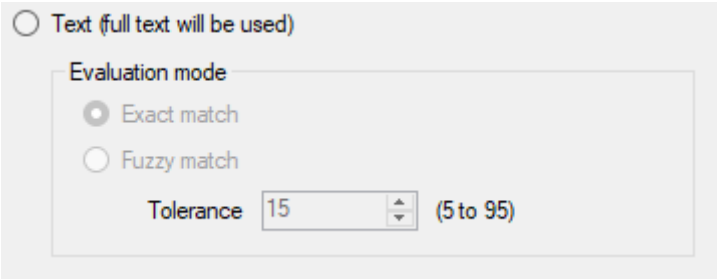
VIDEO BACKGROUNDS

You can now use video's in the background of a question or banner.



SMART TEXT ANSWER JUDGMENT

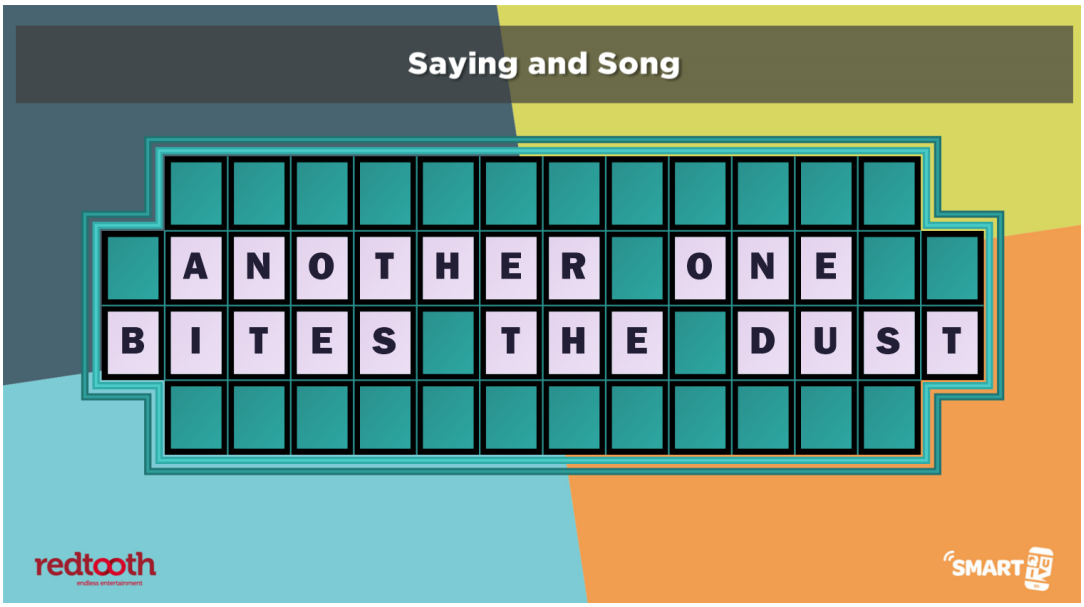
For textual answers, you can now allow a certain amount of variance to cater for spelling errors. Players can make small mistakes and the answer will still be treated as correct. Alternatively, you can explicitly enter all the responses that should be treated as correct.



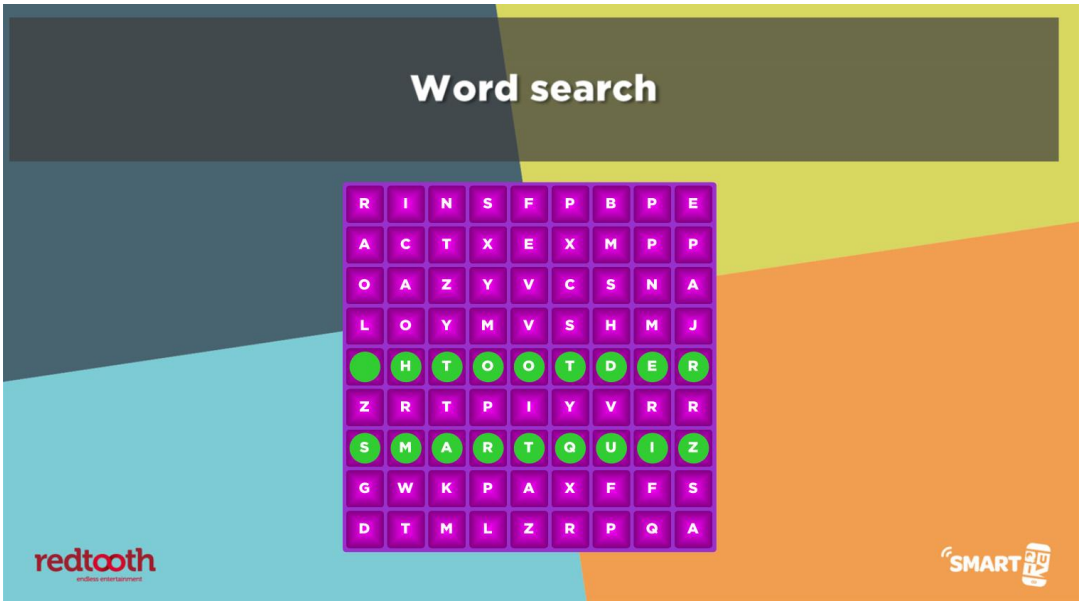
WORD GAMES (SMARTQUIZ PRO)

Word games are here! Word games includes several types of language games of which you see some examples below. They can be used for fastest finger questions or text response questions as well where everybody can answer (with diminishing points over time, quicker correct responses are rewarded with more points).

Guess a word or sentence that is slowly revealing over time. This variation Is also available in the classic 'wheel of fortune' layout.



Search one or more words in a letter grid.



Reveal a word or sentence (with different, configurable visuals than the example above), unscramble a word or sentence or show a word wheel, where players have to puzzle out where the word starts (using also the inner letter).

UNDO/REDO (SMARTQUIZ PRO)

When creating quizzes, it is now possible to undo/redo your actions.

SLIDE TRANSITIONS (SMARTQUIZ PRO)

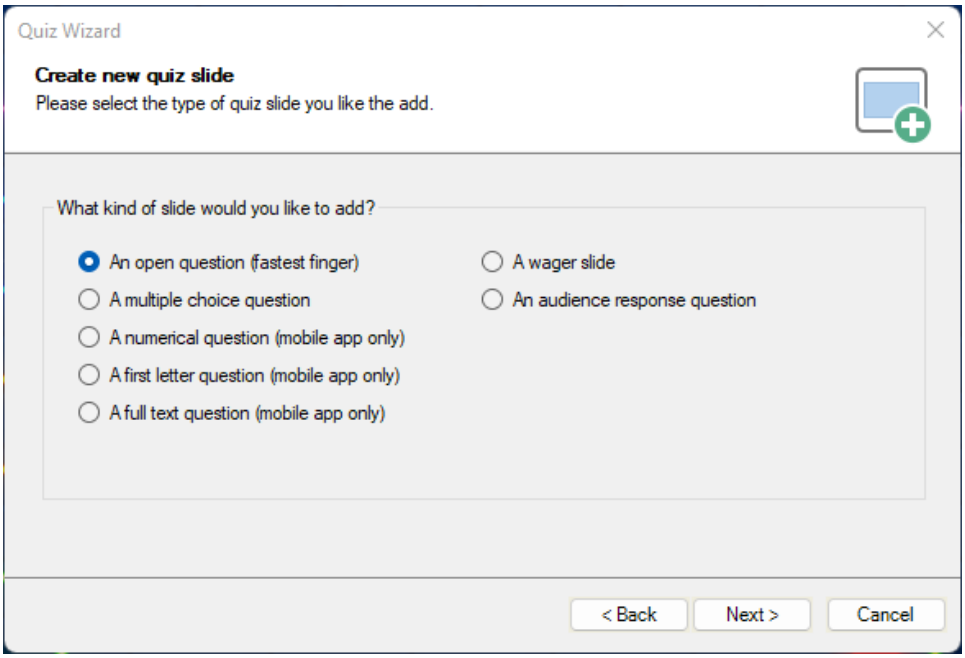
You can now select (or disable) the transitions used between slides.

MOVE AND RESIZE VIDEO ELEMENTS (SMARTQUIZ PRO)

Video elements on a slide can now be positioned and resized at will.

QUIZ WIZARD (SMARTQUIZ PRO)

The quiz wizard helps you to quickly create questions or question rounds.



Quiz Wizard
Create new quiz slide
Please select the type of quiz slide you like the add.
What kind of slide would you like to add?
An open question (fastest finger)
A multiple choice question
A numerical question (mobile app only)
A first letter question (mobile app only)
A full text question (mobile app only)
A wager slide
An audience response question
